## 1) AIM OF REPORT

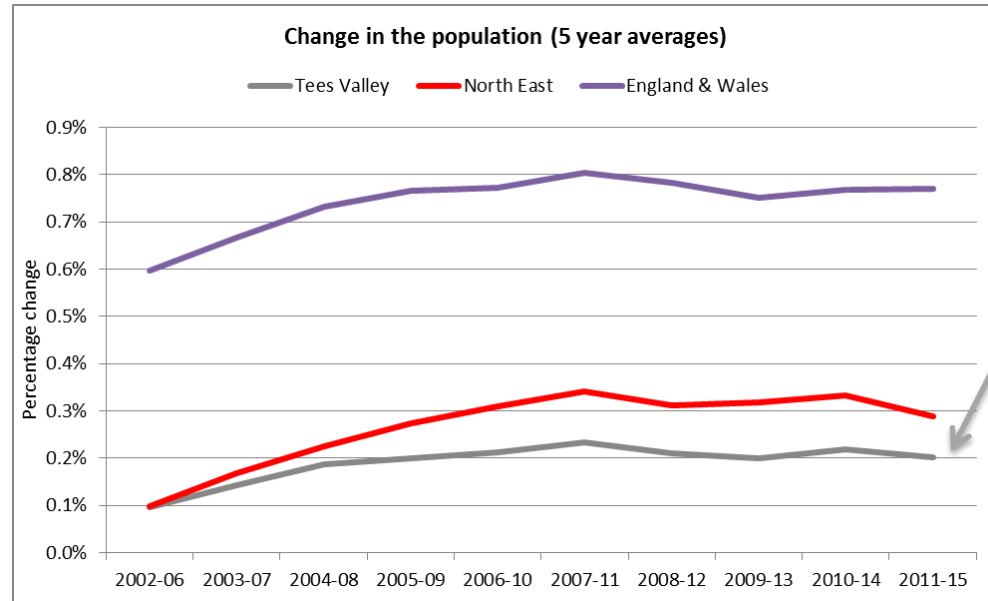

- The Office for National Statistics' (ONS) Population Estimates as of mid-2015 were released on 23<sup>rd</sup> June 2016.
- They are the official set of resident population estimates for the UK and its constituent countries, the regions and local authorities. The estimates for small areas (incl. wards) will be released in November 2016.
- This report provides the mid-2015 population estimates for the Tees Valley. The estimates are provided by sex and by both 5-year and broad age groups:
  - The figures included are rounded to nearest 100 as per ONS' recommendations. Totals may not add exactly due to this rounding.
- The annual components of population change are provided for the last 10 years for trend identification:
  - Further analysis of the components will be provided in separate reports, i.e. migration, fertility and mortality reports.
- The increasing proportion of 'older age' cohorts is briefly examined.

## 2) KEY POINTS

- The Tees Valley's resident population was 667,500 in mid-2015, an increase of 1,200 in a year.
- Population growth in the Tees Valley has been slower than in the North East and nationally. Net migration losses to other parts of the UK have contributed to this.
- The increase was similar to the previous year; however low natural change resulted in international migration being the main driver of the growth.
- In the year to mid-2015, international migration offset migration within the UK. Net migration was INTO the Tees Valley for the first time in 10 years.
- In mid-2015, the number of older people is much higher than in mid-2005 (17.2% increase in the number of those aged 65+). In particular, there has been a large increase in males aged 85+.
- In contrast to nationally and the North East as a whole the number of residents aged 16-64 is less than it was in mid-2005, out-migration has been a key factor in this.

### 3) TEES VALLEY POPULATION HAS REACHED 667,500

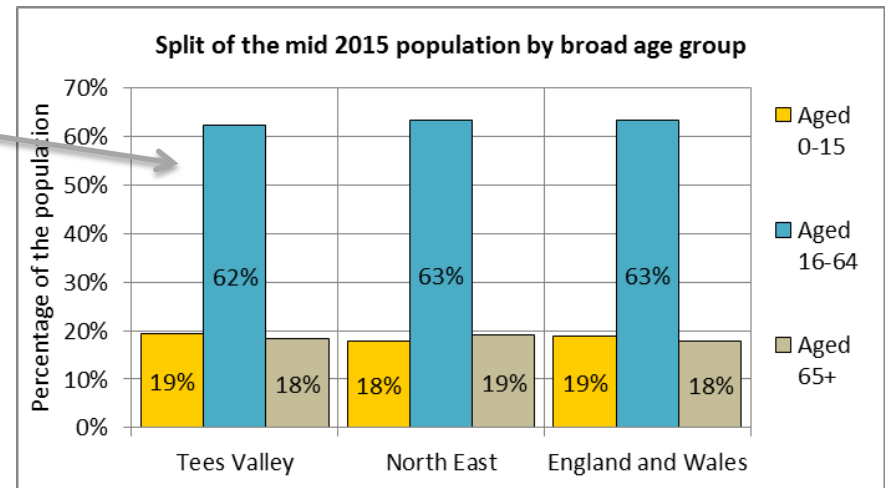

mid-2015 population by quinary age group			
Tees Valley	Males	Females	Persons
<b>All ages</b>	<b>326,200</b>	<b>341,200</b>	<b>667,500</b>
0-4	21,700	20,500	42,200
5-9	21,200	20,500	41,700
10-14	19,100	17,900	37,000
15-19	20,500	19,500	40,000
20-24	22,600	21,200	43,800
25-29	21,500	21,600	43,100
30-34	19,600	21,400	41,000
35-39	17,800	19,100	37,000
40-44	19,900	21,200	41,100
45-49	22,600	24,100	46,800
50-54	23,900	25,100	49,000
55-59	21,400	22,300	43,700
60-64	18,600	19,600	38,100
65-69	18,700	19,900	38,700
70-74	13,700	14,500	28,200
75-79	10,800	13,100	23,900
80-84	7,300	9,900	17,200
85-89	3,700	6,000	9,700
90+	1,500	3,700	5,200

The growth in population has been slower in the Tees Valley than the growth seen across the region and nationally.

Smaller proportion of the population are of working age in the Tees Valley.

mid-2015 population by broad age group				
Tees Valley	Male	Female	Persons	Split of persons by age
<b>All Ages</b>	<b>326,200</b>	<b>341,200</b>	<b>667,500</b>	
0-15	65,900	62,700	128,600	19.3%
16-64	204,600	211,300	415,900	62.3%
65+	55,800	67,200	122,900	18.4%

## 4) COMPONENTS OF POPULATION CHANGE

### Official population estimates for the last 10 years, with the associated components

TEES VALLEY	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
<b>Population</b>	<b>653.8</b>	<b>655.4</b>	<b>656.7</b>	<b>658.5</b>	<b>659.0</b>	<b>660.8</b>	<b>663.0</b>	<b>663.6</b>	<b>665.1</b>	<b>666.2</b>	<b>667.5</b>
Births		8.2	8.2	8.5	8.3	8.6	8.7	8.6	8.5	8.1	8.0
Deaths		6.6	6.7	6.5	6.7	6.2	6.2	6.3	6.5	6.2	7.1
<b>Natural Change</b>		<b>1.6</b>	<b>1.4</b>	<b>2.0</b>	<b>1.6</b>	<b>2.4</b>	<b>2.6</b>	<b>2.3</b>	<b>1.9</b>	<b>1.8</b>	<b>0.9</b>
Net Migration within UK		-0.6	-1.3	-1.0	-1.7	-1.4	-1.1	-1.9	-1.4	-1.6	-1.1
Net International Migration		1.0	1.6	1.2	1.1	1.2	1.5	0.1	0.9	0.6	1.4
Other population change*		-0.4	-0.5	-0.4	-0.5	-0.4	-0.7	0.1	0.1	0.2	0.0
<b>Net Migration</b>		<b>0.0</b>	<b>-0.1</b>	<b>-0.2</b>	<b>-1.1</b>	<b>-0.6</b>	<b>-0.3</b>	<b>-1.7</b>	<b>-0.4</b>	<b>-0.8</b>	<b>0.3</b>
<b>Net Change</b>		<b>1.6</b>	<b>1.3</b>	<b>1.8</b>	<b>0.5</b>	<b>1.8</b>	<b>2.3</b>	<b>0.6</b>	<b>1.5</b>	<b>1.1</b>	<b>1.2</b>

Decrease due to fewer under 24 year olds giving birth.

Increase due to more deaths of under 64 year olds, in particular more 25-44 year old males and 25-34 year old females.

Large number of deaths in the year to mid-2015, resulted in smallest natural change since year to 2004.

Growth from international migration was greater than growth from natural change – first time since year to 2007.

Net migration flow was into the Tees Valley – first time since 2005. This was due to increased net gain from overseas and reduced net loss to the rest of the UK.

SOURCE: ONS mid-year population estimates (IN THOUSANDS)

\*includes changes to special populations such as Armed Forces and Prisoners, and also unattributed population change (UPC) pre-2011. Net migration includes this component.

### Impact of Components on the Population Change between 2014 and 2015 - components as % of 2014 population:

	Tees Valley	North East	England & Wales
Natural Change	0.13%	0.00%	0.29%
Migration within UK	-0.16%	-0.01%	-0.01%
International Migration	0.21%	0.24%	0.55%
Net Migration	0.05%	0.23%	0.54%
Net Change	0.18%	0.23%	0.83%

There was growth in the Tees Valley due to natural change whereas in the North East there were slightly more deaths than births.

Growth from migration in the Tees Valley was substantially lower than in the North East and nationally.

Much lower growth in the Tees Valley than in the country as a whole.

## 5) POPUALTION PYRAMID

The peaks and troughs present in the pyramid-in mid-2005 are visible in the mid-2015 data, shifted by 10 years.

Source: ONS mid-2015  
Population Estimates

For 90+ no figures by single  
year of age are available so the  
age group isn't included here.

Population Pyramid for Tees Valley - 2005 vs 2015

Block rows = 2005  
Outlines = 2015

Higher number of older  
people, especially males, due  
to improvements in life  
expectancy.

The pyramid-for  
England and Wales is  
wider in 2015  
compared with 2005,  
especially for those  
aged 20-36 in mid-  
2015, due to impact of  
immigration; whereas,  
in the Tees Valley the  
majority of cohorts  
have reduced in size  
due to net migration  
out of the area [-4,800  
over the 10-yr period].

Fall in  
numbers  
aged 30-44

Increased  
number of  
births

## 6) 65+ AGE GROUP BIGGER BY 17%, TOTAL POPULATION BIGGER BY ONLY 2%

Tees Valley has an ageing population: this can be seen through the increase in the average (median) age of the population and the increase in the number and proportion of older people in the population.

Median age	2005	2015
Tees Valley	39.2	41.1
North East	40.0	41.9
England and Wales	38.7	39.9

There has been an increase in the numbers in all the older age groups compared to 10 years ago.

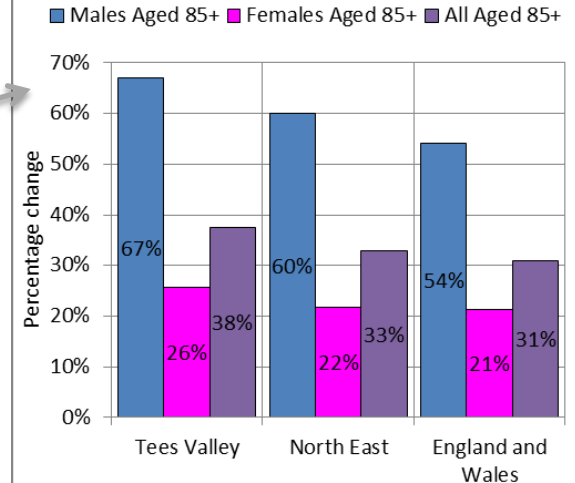

There has been a large increase in the number of 85+ year olds. In the Tees Valley this age group made up 2.2% of the population in 2015 compared with 1.7% in 2005 (4,100 more).

In common with the North East and nationally, median age in the Tees Valley has increased; it remains higher than nationally and below the North East.

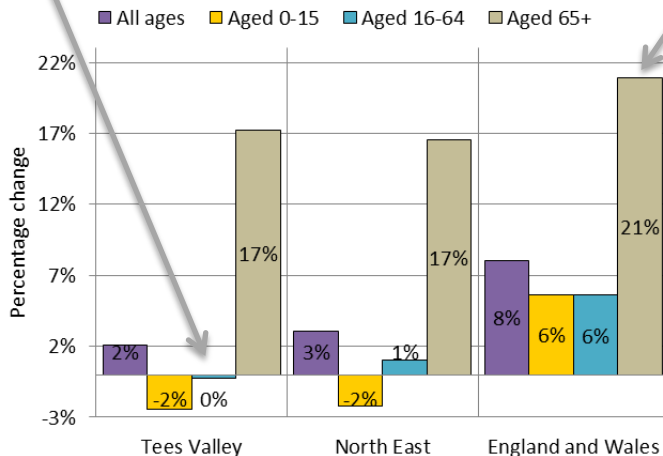

Unlike the North East and nationally, Tees Valley has not experienced an increase in working age population (16-64).

Unlike the 85+ population, the 65+ population in the Tees Valley has seen a smaller increase than nationally, due to smaller increases in the 65-74 age group.

Change in the population aged 85 and over between mid 2005 and mid 2015

Change in the population between mid 2005 and mid 2015 by broad age group

The male population has grown faster than the female population, especially in the 85+ age group. This has decreased the female to male ratio.

Sex Ratio (No. women for every 100 men)	All ages		Aged 85+	
	2015	2005	2015	2005
Tees Valley	105	106	187	248
North East	104	106	188	247
England and Wales	103	104	186	237

Improvements in male mortality are largely driven by reductions in tobacco smoking and advances in health treatments for circulatory illnesses. Male occupations over the same period have also become less physical and safer.

## 7) QUALITY AND METHODOLOGY INFORMATION

- The population estimates are based on the census and are updated annually to account for population change during the period from 1 July to 30 June. The two main contributors to population change are natural change (births minus deaths) and net migration (the difference between long-term moves into and out of the UK or local areas).
- Mid-year population estimates relate to the ‘usually resident population’. The estimates account for long-term international migrants (people who change their country of usual residence for a period of 12 months or more), but do not account for short-term migrants (people who come to or leave the country for a period of less than 12 months).
- A number of data sources are used to compile the population estimates, including the General Register Office (GRO), the International Passenger Survey (IPS), the Higher Education Statistics Agency (HESA), the National Health Service Central Register (NHSCR) and the Ministry of Justice.
- Some of the administrative data used in estimating international migration at Local Authority level was not available at the time of production of the mid-2015 population estimates. The size of the impact on the mid-2015 population estimates is not yet clear. Further details are provided in the [QMI](#).
- The mid-2005 population estimates have been revised in light of the 2011 Census.
